

Experimental Results of HCORAP Solvers

Results Summary

This document summarizes the experimental results obtained from three different solvers applied to the HCORAP problem: **RC2 MaxSAT**, **Incremental SAT**, and **WMaxCDCL**.

Table 1: Comparison of HCORAP solvers

Instance (U-A-V)	Timeout	RC2 MaxSAT	Incremental SAT	WMaxCDCL
10-5-4	5 min	137 (optimal, 0.04s)	132 (best, timeout)	302 (optimal, 0.46s)
10-10-4	10 min	127 (0.10s)	127 (best, time-out)	142 (0.30s)
20-10-5	30 min	0 (time-out)	394 (best, time-out)	0 (time-out)
30-20-5	60 min	0 (time-out)	600 (best, time-out)	0 (time-out)

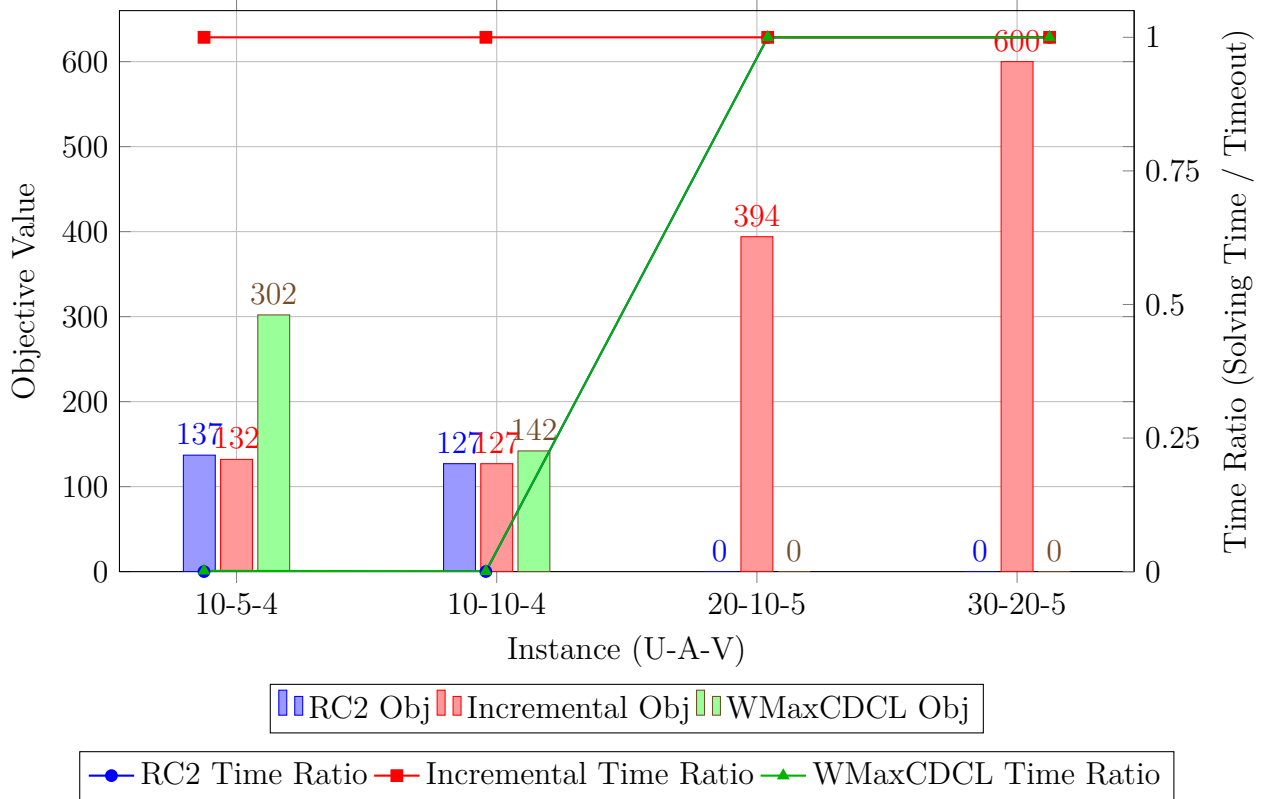

Figure 1: Comparison of HCORAP solvers: objective values (bars) and normalized solving times (lines). A ratio of 1 indicates that the solver reached the time limit.
